

## Press release

### TiL Award 2019 in the category "Best Lighting Project" for concentration luminaire goes to Lumitronix

The LED specialist Lumitronix from Baden-Württemberg was once again able to win an award at this year's LED professional Symposium & Expo in Bregenz. Together with Nichia, the world's largest LED manufacturer, and the Swiss luminaire manufacturer Belux, the Hechingen-based company received the Trends in Lighting (TiL) Award in the category "Best Lighting Project". This award is presented annually to outstanding application solutions in the lighting industry by the organiser of the LpS, Luger Research.

The prize was awarded to the office floor lamp *koi s* from Belux. The luminaire, created by Japanese designer Naoto Fukasawa, which allows indirect and direct lighting, could be converted to Vitasolis technology by Lumitronix within a few weeks thanks to the long-standing distribution partnership with Nichia.

Two individually developed modules have been fitted with the new Vitasolis LEDs, which can promote productivity thanks to their enlarged light spectrum (increased cyan content, reduction of the yellow component) and are therefore particularly advantageous for workplace lighting. The extended spectrum is also very pleasant for the human eye and ensures that they will not tire so rapidly.

#### **About Lumitronix**

Lumitronix has been one of the leading specialists for LEDs and LED products for many years. As a competent partner for the industry, Lumitronix possesses broad application knowledge from numerous sectors. The Swabian company, based in Hechingen, Germany, has ISO 9001 certification and is also the official distributor of market-leading manufacturers of LED technology. Lumitronix is not only involved in the distribution of LED products, but also develops and manufactures in-house according to customer-specific requirements. Two ultra-modern production lines with the latest machine technology allow the assembly of both rigid and flexible PCBs. A special feature of the flex production is the reel-to-reel processing, with which almost endless lengths can be realized. The production site in Hechingen furthermore provides the benefit of being able to respond quickly and reliably to individual customer wishes and requirements. Quality Made in Germany.
