Press release

Flexible control unit with smart operation - the PowerController V2 Casambi from Lumitronix

With its PowerController V2 Casambi, the German LED company Lumitronix is placing another variant of its flexible and versatile control unit on the market, which opens up new possibilities for luminaire manufacturers, especially in terms of operability. "Thanks to the integrated Casambi module, the compact control unit is able to individually adjust connected LED modules via an app." reports Christian Hoffmann, CEO of the Hechingen-based company.

Four output channels offer a wide variety of connection scenarios. Thus, four monochrome LED modules can be controlled in exactly the same way as e.g. Tunable White or RGBW versions. "The Casambi module transmits the signals from the Casambi app, free of charge for both iOS and Android devices, directly to the connected light sources via Bluetooth." Hoffmann continues. Another aspect that distinguishes the PowerController V2 Casambi from other control devices is its slim format. Measuring only 99 x 29 x 13 mm, it can be installed in almost any type of luminaire.

With the Casambi version of the PowerController V2 from Lumitronix, luminaire manufacturers obtain a powerful, flexible and intelligently operable Plug&Play control unit which is suitable for a very large number of luminaire types due to its minimal size and gives companies in the lighting industry a great deal of freedom when planning new models.

About Lumitronix

Lumitronix has been one of the leading specialists for LEDs and LED products for many years. As a competent partner for the industry, Lumitronix possesses extensive application knowledge from numerous industries. The Swabian company based in Hechingen has ISO 9001 certification and is also an official distributor of market-leading manufacturers of LED technology. Lumitronix does not only deal with the distribution of LED products, but also develops and manufactures in-house according to customer-specific requirements. Quality Made in Germany.
