Uncompromising LED lighting quality - LED specialists Lumitronix and LEDIM agree on multi-level partnership

Hechingen/Berlin - A comprehensive partnership has been established between the German LED specialist Lumitronix and LEDIM, manufacturer of high-quality LED components. From now on, Lumitronix will distribute LEDIM's flicker-free dimmers and Dim2Warm LED engines in its far-reaching online shop www.leds.de as well as through B2B direct sales. In addition, LEDIM products will be produced at the ISO certified Lumitronix factory in Hechingen.

The Berlin-based company LEDIM has been successfully developing high-quality LED components for the luminaire industry for many years. The portfolio includes 100% flicker-free drivers and Dim2Warm LED engines that - embedded in a flexible modular system of dimming controls - promise the highest quality of light for all lighting professionals.

Lumitronix has been one of the leading LED specialists for many years. As a partner for the industry, Lumitronix possesses broad application knowledge from numerous sectors. The Swabian company distributes LED components from leading manufacturers and develops LED solutions according to customer-specific requirements. Production takes place in the company's own factory - this guarantees Lumitronix customers fast delivery times and quality made in Germany.

The combination of so much know-how is a great advantage for the customers of both companies. "In this way, we not only ensure excellent customer care, but also the best conceivable manufacturing quality," Volker Kamp and Ole Noculak, the two LEDIM founders, are pleased to say.

Christian Hoffmann, CEO of Lumitronix, emphasises: "For us, the LEDIM portfolio with its uncompromising light quality represents a sensible addition to our own range in the LED high-end segment. This is a win-win for both sides, especially in view of the upcoming EU flicker regulation."

And the partnership does not end here: LEDIM and Lumitronix will also successfully combine their expertise in the development of new products and customer-specific adaptations of standard products in the future.

About Lumitronix:

Lumitronix has been one of the leading specialists for LEDs and LED products for many years. As a competent partner for the industry, Lumitronix possesses broad application knowledge from numerous sectors. The Swabian company, based in Hechingen, Germany, has ISO 9001 certification and is also the official distributor of market-leading manufacturers of LED technology. Lumitronix is not only involved in the distribution of LED products, but also develops and manufactures in-house according to customer-specific requirements. Two ultra-modern production lines with the latest machine technology allow the assembly of both rigid and flexible PCBs. A special feature of the flex production is the reel-to-reel processing, with which almost endless lengths can be realized. The production site in Hechingen furthermore provides the benefit of being able to respond quickly and reliably to individual customer wishes and requirements. Quality Made in Germany.

About LEDIM:

LEDIM has been successfully developing high-quality LED components for the luminaire industry for many years. The Berlin-based company has set itself the ambitious goal of offering luminaire designers a complete solution not only for individual objects but for entire luminaire families. Thus, the portfolio consists of 100% flicker-free drivers and Dim2Warm LED engines with the highest quality of light. LEDIM develops all components in Germany and sees itself as a local contact. LEDIM advertises with the slogan "We have the right products to take your luminaire design to the next level. Are you missing a feature or product? Just get in touch with us."
